## Up on the Cloud

In the “Control” tab of the Node Shelf, you can create nodes such as Buttons or Switches. These Buttons and Switches are unlike physical Neuron Blocks. You can interact with them on the iPad Screen.

These nodes under “Control” tab has a second function. They form a control panel you can access through the button at the right top of the screen. At the control panel, it is possible to create a link and QR code using the “Share” button. Then you may open the link in your cell phone, to control your project from remote places.

# Remote Control

LED Switch

Virtual LED

Please scan QR code

OK
